Experience

APXOR

Jul 2025 – Present

Software Developer

Jan 2026 – Present

- Developed and maintained enterprise-grade analytics products used by 50+ customers to monitor user engagement, campaign performance, and behavioral insights; owned end-to-end feature delivery from design to production deployment across multiple quarterly releases in a fast-paced SaaS environment.
- Designed, built, and optimized backend microservice APIs and event-driven reporting pipelines capable of processing millions of daily user events, enabling real-time analytics, funnel tracking, and customer-facing dashboard features with sub-second query response times at enterprise scale.
- Architected and delivered 15+ reusable, type-safe React.js and TypeScript components for campaign customization, data visualization, campaign reporting, and engagement metrics, establishing shared component patterns that reduced feature development time by 40% across the cross-functional engineering team.
- Improved frontend application performance by 30%+ through strategic lazy loading, route-based code splitting, React.memo-based memoization, and efficient Zustand-powered state management, resulting in significantly faster dashboard load times and enhanced user experience for enterprise customers.

Software Development Intern

Jul 2025 – Jan 2026

- Contributed to the full development lifecycle of Apxor's Web Engagement SDK from feature scoping to production release, implementing core capabilities including onboarding flows, interactive walkthroughs, contextual tooltips, behavioral nudges, and real-time user interaction tracking integrated across multiple customer web applications.
- Implemented an rrweb-based Session Replay module that captured and reconstructed complete user journeys, enabling product and support teams to visually replay sessions, diagnose UX friction points, and resolve customer-reported issues up to 60% faster compared to log-only debugging workflows.
- Engineered a comprehensive event tracking system covering clicks, page views, scroll depth, form interactions, and fully configurable custom business events, enabling customers to build detailed behavioral analytics pipelines and feed accurate data into engagement dashboards.
- Investigated and resolved 20+ SDK-related production issues spanning cross-browser JavaScript compatibility, third-party script conflicts, asynchronous event collection race conditions, and customer-specific integration failures, improving overall SDK stability and reducing customer-reported incidents.

Projects

Podcast Streaming Platform

- Architected and developed a full-stack podcast streaming platform using MongoDB, Express.js, React.js, and Node.js, supporting podcast uploads, audio streaming, favorites management, and multi-role content management.
- Designed and implemented 10+ secure REST APIs with JWT-based authentication and Role-Based Access Control (RBAC), ensuring protected access for admin, creator, and listener roles.
- Integrated Cloudinary for cloud-based media storage and delivery, Zustand for lightweight global state management, and TanStack Query for efficient server-state synchronization and caching.
- Deployed a production-ready application with backend hosted on Railway and frontend on Vercel, implementing environment-based configurations, CORS policies, and CI/CD-ready project structure.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Go, Python, SQL

Frontend: React.js, TypeScript, HTML5, CSS3, Tailwind CSS, Shadcn UI, Zustand, TanStack Query

Backend: Node.js, Express.js, REST APIs, Microservices, JWT Authentication, RBAC

Databases: MongoDB, MongoDB Atlas, MySQL

Analytics & SDK: Analytics Dashboards, Web SDK Development, Session Replay, rrweb, Event Tracking, User Behavior Analytics, Browser APIs, Performance Optimization

Tools & Practices: Git, GitHub, Vite, Webpack, Chrome DevTools, Agile/Scrum, Cloudinary, Railway, Vercel

Education

Bachelor of Technology in Computer Science, KIET College

2020 - 2024
